

Introduction to SPD Subtypes (2 hours)

An extended version of STAR's Sensory Processing Disorder 101 course, this course provides a more in-depth look at the clinical presentations of each of the subtypes, the inter-relational nature of sensory processing-regulation-relationship, and provides therapeutic guidelines for intervention for each subtypes.

Learning Objectives:

- Identify the main functions of each of the 8 discussed sensory systems
- Define the different subtypes of the SPD Nosology
- Identify the functional impacts of the SPD subtypes on individuals
- Discuss the bi-directional impacts of sensory processing, regulation and relationship
- Identify three therapeutic guidelines for intervention for each subtypes
